

## How is it administered?

The **FAST™ Hand Screening System** has been designed specifically for the workplace environment. Finally you have diagnostic and detection tools that are safe, fast and accurate available for use in your setting, when you need it where you need it.

**The location.** *You pick the place.* The **FAST™ Hand Screening System** has been designed specifically for application in the workplace. As a stand alone unit it can be connected to just about any computer system and an electrical outlet.

**The Administrator.** *You pick the administrator.* The **FAST™ Hand Screening System** can be administered by either a certified Work Wright technician or Work Wright can train and certify one (or two (recommended)) of your employees to provide you greater flexibility and save money. Contact a Work Wright representative for more information. **Time.** The **FAST™ Hand Screening System** takes about 10 minutes to collect data from one employee/applicant. Collecting data from more than one will go faster: The test consists of four one minute long tests.
