

What is the FAsT™ Hand Screening System?

The **FAsT™ Hand Screening System** is a computer assisted, mechanical screening device that has been specifically designed to identify dysfunctional hands. The system consists of two primary components: A Handset and an analysis service.

The **hand set** is a safe, fast and accurate data collection device. This bio-mechanical device enables the collection of data without the use of needles, electrical shock or other painful processes.

The **analysis service** is a centralized, third party data processing and analysis service. Data is transmitted from the handset to the analysis service through secure internet, is processed and analyzed and the report is sent to a secure website for retrieval.

A simple, yet very effective 3 step functionality screening system
